

# IT Business Management

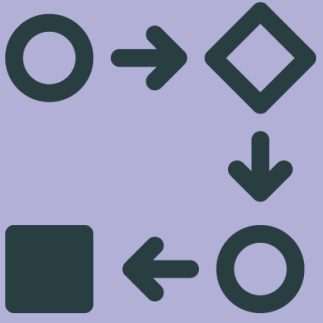

Get visibility into your project and application portfolios; gain financial insight into the cost of service delivery; better manage demand, resources, and budgets; decide where to invest your dollars to best support organizational goals.

## **Align applications with business goals and priorities**

With Application Portfolio Management (APM), get visibility into your applications to manage costs, ensure alignment, and easily adapt to change.

## **Align work to goals and strategy to ensure you work on the right projects**

Project Portfolio Management (PPM) manages your entire project life cycle from idea to execution across your technology and business portfolios.

## **Engage employees for the next big idea**

With Innovation Management, capture, track and convert ideas to demands, projects, stories, and other SAFe work items to deliver business outcomes with speed and agility, all from one location.

## **Simplify your funding workflow**

Enhanced and simplified processes for top-down and bottom-up funding makes it easier for you to request and allocate funds to investments.

## **Gain visibility into the software development life cycle**

Manage scrum, hybrid, or waterfall development efforts throughout the life cycle, from inception through testing and deployment.
