

# IT Business Management

Get visibility into your project and application portfolios; gain financial insight into the cost of service delivery; better manage demand, resources, and budgets; decide where to invest your dollars to best support organizational goals.

## **View comprehensive information related to projects in a program**

View key information that is relevant to the selected projects in a program.

## **Integrate risk, issue, decision, action, and request changes with RIDAC**

Analyze the impact of the risks and associate existing RIDAC records for your demands and projects.

## **Create projects in multicurrency**

Create a project with a flexibility of executing its sub-projects at a different geographical location in a local currency.

## **Simplified funding workflow**

Enhanced and simplified process for top-down and bottom-up funding makes it easier for you to request and allocate fund to investments.

## **Track the lifecycle of hardware on the TPM timeline**

Monitor the lifecycle of hardware models on which your business applications run.

## **Smart even load for resource allocation**

The smart even load allocation spread takes the availability of resources into account while allocating and only applies hours evenly where possible.
